September 9-11, 2021
Westin Chicago River North
Chicago, IL

PURPOSE AND CONTENT

The purpose of this meeting is to provide state of the art clinical research and vascular biology knowledge relating to vascular disease, with a special emphasis on surgical and endovascular therapy. The program will include presentations of original research by investigators interested in vascular disease. A portion of the program is dedicated to question-and-answer interaction between the presenters and the audience.

EDUCATIONAL OBJECTIVES

At the end of this activity, participants will be able to:

- 1) Apply new techniques and strategies to use electronic medical records more efficiently in their practice.
- 2) Identify important medical risk factors and their management for patients with peripheral artery disease.
- 3) Describe the optimal treatment for patients with challenging abdominal aortic anatomy.
- 4) Discuss risk factors that may contribute to poor outcomes in patients with acute aortic syndrome.
- 5) Improve the delivery of care to vascular patients by applying the latest advances in diagnosis and treatment of peripheral arterial disease, especially those with critical limb ischemia.
- 6) Recognize factors that influence the cost, value and outcomes of carotid artery revascularization procedures.
- 7) Explain which patients can benefit from superficial and deep venous interventions.
